Initial Orthodontic Exam

As a courtesy to our patients, our orthodontists provide an initial examination free of charge. At this appointment, the doctor will examine the teeth and jaws and assess the need for orthodontic treatment. Following the exam, the orthodontist will outline a treatment plan. A panoramic radiograph will be necessary for the orthodontist to make a definitive diagnosis. If you have insurance coverage, your policy may or may not cover the fee for this radiograph. If you do not have insurance coverage, you will be responsible for the fee.
